

## WHAT WE DO

United Transportation specializes in building out and managing our clients supply chain. Logistics are at the heart of every business model in the modern tech era, so keeping up with the times is key to your business success. We leverage our long established relationships with major distribution centers to help you reduce your costs for logistics and also super size the reach you gain with customers and potential customers globally.

## OUR SERVICES

We deliver complete project management solutions on a turn-key basis, offering you the convenience of a single source while freeing your team for other requirements. Alternately, we offer expert assistance if you are relying on others or undertaking any of these endeavors on your own.

## CAPABILITIES

With our proven 4PL capabilities, United Transportation offers customers a full service portfolio, including global supply chain design and planning, logistics and distribution, customs brokerage and international trade services, as well as freight services via ocean, air or ground.

With the rise of global commerce we're uniquely positioned to leverage our 4PL capabilities, systems and global network to synchronize your global supply chain from end to end - regionally, nationally and globally.

Includes machinery handling in-and-out as well as full inventory tagging and reporting, and much more.

- **Airport Transfers**

- **Certified Cargo Screening Facility (CCSF)**

- **Dangerous Goods Repackaging**

- **TSA/CCSF**

Shippers that do not want to become a Certified Cargo Screener but wish to avoid potential delays or damage to their shipments due to the screening process can use a freight forwarder’s Indirect Air Carrier (IAC) services, or use an Independent Cargo Screening Facility (ICSF). An ICSF is an independent cargo screening facility that is authorized by TSA only to screen cargo that will be transported by a passenger air carrier. Most ICSFs are not freight forwarders. Under CCSP TSA certifies cargo screening facilities located throughout the United States to screen cargo prior to providing it to airlines for shipment on passenger flights. Participation in the program is voluntary and designed to enable vetted, validated and certified supply chain facilities to comply with the 100 percent screening requirement.

CCSP is a practical, supply chain solution, which provides security while ensuring the flow of commerce. Cargo is screened at the most efficient and effective point. It is done before individual pieces of cargo are consolidated for shipment. Certified Cargo Screening Facilities (CCSF) must carry out a TSA approved security program and adhere to strict chain of custody requirements. Cargo must be secured from the time it is screened until it is placed on passenger aircraft for shipment.

- **TSA**

The Transportation Security Administration (TSA) was created in the wake of 9/11 to strengthen the security of the nation’s transportation systems while ensuring the freedom of movement for people and commerce. Within a year, TSA assumed responsibility for security at the nation’s airports and deployed a Federal workforce to meet Congressional deadlines for screening all commercial airline passengers and baggage. In March 2003, TSA transferred from the Department of Transportation to the Department of Homeland Security.

TSA employs a risk-based strategy to secure U.S. transportation systems, working closely with stakeholders in aviation, rail, transit, highway, and pipeline sectors, as well as the partners in the law enforcement and intelligence community. The agency will continuously set the standard for excellence in transportation security through its people, processes, technologies and use of intelligence to drive operations.
